

# Your organization runs on trust. *Your IT should too.*

CalCyber is a Sacramento-based IT and cybersecurity firm built for organizations where security isn't optional — healthcare, utilities, government, legal, and finance. We manage your infrastructure locally, not from a call center.

<p><b>Still using passwords?</b> We deploy passwordless sign-in so your staff taps a button instead of typing and resetting passwords every month.</p>	<p><b>Who manages your network?</b> We deploy and monitor firewalls at every site with intrusion detection, DNS filtering, and encrypted tunnels between offices.</p>	<p><b>What if someone leaves?</b> We handle offboarding in hours — account disabled, devices wiped, licenses reclaimed. No loose ends.</p>
<p><b>Are your devices managed?</b> New laptops arrive pre-configured. Apps install automatically. Updates and security policies apply without IT tickets.</p>	<p><b>Who do you call at 2 AM?</b> Us. A local engineer responds — not a ticket queue. We monitor around the clock and fix most issues before you notice.</p>	<p><b>Ready for an audit?</b> We keep your compliance documentation current — HIPAA, CMMC, insurance requirements. Always audit-ready, not scrambling.</p>

**Built for organizations that need more than a basic IT shop**

- **Healthcare** — HIPAA compliance, encrypted devices, audit-ready documentation, BAA on day one
- **Government & Municipal** — zero trust architecture, identity governance, and regulatory compliance
- **Utilities & Water** — OT/ICS security, network segmentation, SCADA monitoring, and 24/7 alerting
- **Legal & Financial** — data loss prevention, privileged access controls, and client confidentiality safeguards

## What we manage — end to end

<p><b>Network &amp; Firewalls</b> pfSense deployment, VPN tunnels, IDS/IPS, DNS filtering, and traffic monitoring at every site.</p>	<p><b>Identity &amp; Access</b> Microsoft 365, Entra ID, passwordless auth, conditional access, and MFA for every user.</p>	<p><b>Device Management</b> Intune enrollment, app deployment, compliance policies, and zero-touch provisioning.</p>
<p><b>Security Operations</b> 24/7 monitoring, endpoint protection, threat detection, and incident response on retainer.</p>	<p><b>Compliance &amp; Audit</b> HIPAA, CMMC, and regulatory readiness — policies, risk assessments, and ongoing management.</p>	<p><b>Help Desk &amp; On-Site</b> Local support from engineers who know your environment. Phone, remote, and in-person.</p>

**Why CalCyber**

- **Sacramento-based** — local engineers, on-site visits, not an overseas NOC
- **GIAC-certified team** — SANS-trained in architecture, defense, and industrial security
- **We document everything** — you always know what's deployed and why
- **Flat-rate pricing** — predictable monthly costs, no surprise invoices
- **Open-source & best-of-breed** — no vendor lock-in, no proprietary black boxes
- **Built for regulated industries** — compliance is default, not an add-on

**BOOK A CONSULT**

## Let's start with a conversation

No sales pitch. We'll look at what you have, tell you what we'd do differently, and give you a straight answer on cost.
